Lab 2

Python Code

```
import pandas as pd

df = pd.read_csv("online food delivery dataset.csv")
print(df.shape)
df.head()
df.columns
df.info()
```

Output

```
(388, 10)
<class 'pandas.core.frame.DataFrame'>
RangeIndex: 388 entries, 0 to 387
Data columns (total 10 columns):
 #   Column                      Non-Null Count  Dtype
---  ------                      --------------  -----
 0   Age                         388 non-null    int64
 1   Gender                      388 non-null    object
 2   Marital Status              388 non-null    object
 3   Occupation                  388 non-null    object
 4   Monthly Income              388 non-null    object
 5   Educational Qualifications  388 non-null    object
 6   Family size                 388 non-null    int64
 7   Customer Type               388 non-null    object
 8   latitude                    388 non-null    float64
 9   longitude                   388 non-null    float64
dtypes: float64(2), int64(2), object(6)
memory usage: 30.4+ KB
